

COVID-19 Controls

Participant Screening

We no longer perform screening of participants for symptoms.

Fully Vaccinated

For the purpose of this document, people are considered fully vaccinated when they have provided documentation to the Scoutmaster to show that it is 2 weeks after their second dose of a 2-dose vaccine or 2 weeks after a single-dose vaccine.

Social Distancing

We no longer require social distancing.

Face Masks

We do not require masks when we are outdoors.

Fully vaccinated people are no longer required to wear a mask indoors. Others are required to wear a mask indoors. Exceptions include while eating (social distance required), while alone in a vehicle and while alone in a tent. Participants are to bring their own masks. The Troop will have a supply of masks on hand as a backup.

Sanitation

Water will be available for hand washing either via a sink with running water or via a water jug with spigot at the camp site on front country (aka. car camping) trips. Troop leaders will supervise use of the jug to prevent and detect potential contamination, and they will sanitize the spigot frequently using a chlorine bleach solution sprayer.

Hand sanitizer will also be available.

Tents

Only participants from the same household may share a tent, subject to existing Youth Protection rules. The Troop will provide sufficient tents to enable this, including single person tents on backpacking trips.

Dining

The potential for contamination during dining will be minimized as follows:

- The designated cooks for each meal will serve the food for that meal (no self-serve).
- We no longer use disposable tableware as a COVID-19 control.
- Cooking gear and tableware will be disinfected after each use. On front country trips, we utilize [chemical sanitization](#), and on back country trips, we utilize hot water sanitization.

Program Activities

Some program materials (e.g., shovels, fishing rods) do not lend themselves to sanitization. Scouts will be reminded to wash or sanitize their hands after using shared materials.

Vaccination

The Troop encourages Scout families to get their eligible Scouts vaccinated.

Risk

In accordance with guidance from the Boy Scouts of America (BSA), people at high risk for severe illness from COVID-19 require physician approval to participate in an in-person troop activity. We define this as having any of the following risk factors (based on the CDC description as of 7/5/20):

- Age 65 or above
- Chronic kidney disease
- COPD (chronic obstructive pulmonary disease)
- Immunocompromised state (weakened immune system) from solid organ transplant
- Obesity (body mass index [BMI] of 30 or higher)
- Serious heart conditions, such as heart failure, coronary artery disease, or cardiomyopathies
- Sickle cell disease
- Type 2 diabetes mellitus

Despite the above measures, the risk of COVID-19 exposure cannot be eliminated. Higher-risk individuals should carefully consider their situations. The BSA recommends that no one in the higher-risk category take part in person.
